# Welcome to WhiteBitcoin

WhiteBitcoin

**WhiteBitcoin**

# What is WhiteBitcoin

WhiteBitcoin, is a new worldwide payment system that allows decentralized digital currency transactions. These transactions are not controlled by a single administrator or the central bank. WhiteBitcoin crypto-currency is based on an open-source platform that is an independent and self-managed financial system. Unlike, a central bank or financial institutions, the primary objective of the crypto-currency system is to offer financial security and income stability to the person. In a centralized financial system, we all get dependent on the bank. We save our hard earned money into the bank to secure a better future. In return, the bank imposes hidden fees and huge transaction charges that greatly impacts your investments and transactions.

The WhiteBitcoin system is based on a P2P network, that is, person to person with transactions taking place between them without any intermediate bank system. P2P network offers a transparent, secure and safe non-government platform which depends on the latest, underlying blockchain technology. This system is obviously more fair, efficient and fast. You can use WhiteBitcoin across the globe. This gives you a real-time system to send and receive payment from any part of the world at any time 24x7. The people who developed this open system are renowned entrepreneurs and expert professionals of the crypto-currency industry. The team consists of the best of digital marketers, designers and coders. All these professionals are world's best talents in their respective fields.

We here bring you multiple opportunities for WhiteBitcoin investments that include mining, trading, staking, affiliate and lending. You will understand the importance and fun once you acquire your WhiteBitcoin. All the transactions will be transparent while maintaining the confidentiality of the investors. There are no hidden charges or third party involved and all transactions take place in real time from anywhere. Come, join us to extend our wonderful family of WhiteBitcoin investors and take your investments to the next level.

WhiteBitcoin

# Why WhiteBitcoin

WhiteBitcoin or cryptocurrency are revolutionizing our understanding of money. However, WhiteBitcoin does not intend to disrupt the manner in which consumers and merchants process payments. WhiteBitcoin intends to make digital payments easier and convenient around the world. WhiteBitcoin uses blockchain technology to cryptonize the payment process that is familiar to both consumers and merchants. The usual payment process for consumers involves paying for an item using the local hard currency, such as the Euro, Dollar and Indian Rupee. As the local payments are easier to manage, it is primarily difficult for people to adopt this cryptocurrency route.

WhiteBitcoin

# Fast Finance Process

We process all payments quickly and accurately. You can view our work through your web office transparently. Fastest cloud mining provider, 99% hardware working fast

WhiteBitcoin

# Very Secure

Years of experience in the operation of the pond, cast a super safety awareness, unique, high-expansion, high-performance stratum architecture and a complete background monitoring

WhiteBitcoin

WhiteBitcoin

# Own Blockchain Technology

**Own Blockchain Technology**  
A blockchain is a continuously growing list of records which are secured using cryptography. It records transactions between two parties efficiently in a permanent way.

WhiteBitcoin

# How Does Cryptocurrency Work?

- *Public Ledgers*
- *Transactions*
- *Mining*

[www.whitebitcoin.io](http://www.whitebitcoin.io)

## WhiteBitcoin

### Public Ledgers:

All confirmed transactions from the start of a cryptocurrency's creation are stored in a public ledger. The identities of the coin owners are encrypted, and the system uses other cryptographic techniques to ensure the legitimacy of record keeping. The ledger ensures that corresponding "digital wallets" can calculate an accurate spendable balance. Also, new transactions can be checked to ensure that each transaction uses only coins currently owned by the spender. WhiteBitcoin calls this public ledger a "Transaction BlockChain"

### Transactions

A transfer of funds between two digital wallets is called a transaction. That transaction gets submitted to a public ledger and awaits confirmation. When a transaction is made, wallets use an encrypted electronic signature (an encrypted piece of data called a cryptographic signature) to provide a mathematical proof that the transaction is coming from the owner of the wallet. The confirmation process takes a bit of time while "miners" mine. Mining confirms the transactions and adds them to the public ledger.

### Mining

Quite simply, mining is the process of confirming transaction and adding them to a public ledger. To add a transaction to the ledger, the "miner" must solve an increasingly-complex computational problem (like a mathematical puzzle). Mining is open source so that anyone can confirm the transaction. The first "miner" to solve the puzzle adds a "block" of transactions to the ledger. The way in which transactions, blocks, and the public blockchain ledger work together ensure that no one individual can easily add or change a block at will. Once a block is added to the ledger, all correlating transactions are permanent and they add a small transaction fee to the miner's wallet. The mining process is what gives value to the coins and is known as a proof of work system.
